

Comparison of Prommer's *Calculatio* with the volumes in Gotha and London

In the following table the contents of volumes of the *Magnum ac Novum Opus* in London and Gotha are numerically compared with the inventory or "Calculatio" made by Wolfram Prommer shortly before the sale of the drawings to Duke Albrecht V of Bavaria, in the autumn of 1566.

The columns to the left provide a numerical survey of the drawings in the *Magnum Opus* as we have it, the columns on the right first provide the number of drawings Prommer had counted in volumes I–XVI, and then the number of drawings belonging to the same volumes included in the various appendices or additional files.

In general, the numbers in the corresponding sections correspond sufficiently to assume that most of these additional drawings were inserted in the relevant volumes before binding, but not sufficiently not to suppose that some of the drawings meanwhile had been shifted, or may have been discarded. Not counting the 804 drawings in London, which are not included in Prommer's *calculatio*, 1264 drawings were added to the *Magnum ac Novum Opus* after Prommer made his inventory, which suggests a desperate action in the late 1560s to still complete the corpus.
